

INSTRUCTIONS: Tilt jar & add 1/2 cup fruit juice (non-citrus works best). Add 1 or 2 drops dish soap. Open the lure lid and place the entire vial in juice. Replace cork on the top of the jar. Clean any spills with soapy water. Wash hands after use.

Suggestions: Place trap 10' from picnic areas or porch. Do not place trap near active nests as the insects will not stop at the trap on the way to the nest. To increase catches, you may add protein bait such as raw meat, fish or cat food to the juice. Lure solution is effective for 10 days. When the trap becomes full, empty and rinse out the trap. Do not allow the trap to dry up, add juice if evaporated before 10 days. Use a new lure each time the trap is cleaned.

DO NOT PLACE TRAP IN DISHWASHER
Keep lure out of reach of children.
